

Milled peat harrow JLK-19M

With new-type plastic spoons, the JLK-19M produces very good results. The use of plastic spoons and rubber tyres also helps to boost fire safety.

Safety is further enhanced by an offset towing configuration — the tractor is driven alongside

the ridge rather than on top of it. The JLK-19M has two towing points and it has been designed so that the middle set of spoons (over the ridge) can be raised separately — features that also make this machine very useful in multi-harvest production.

Technical data

Tractor type	4-wheel drive agricultural tractor
Capacity	approx. 16 ha/h
Working width	18 m
Weight	approx. 2000 kg
Transportation width	appr. 14 meters
Mounting	towing hook
Required hydraulic outlets	2 pcs, 1-action, 1/2"
